

# HOLDER for REDON BOTTLES

The innovation  
for more safety  
and hygiene

## The Redon bottle holder

The safe and economical solution

### **Good for hygiene. Good for safety.**

Redon systems are used in varying cases for different durations. Secretions are collected in Redon bottles from a few days to several weeks. Until now, drainage bottles were often very impractical – they were often concealed, always in the way when moving to another bed and sometimes they became disconnected or even contaminated because of the need to constantly connect and disconnect them.

But we have been working with doctors to come up with a solution that is specially designed for hospitals. The Redon bottle holder now offers total safety and flexibility.

### **Good for processes. Good for quality.**

The Redon drainage bottles are securely housed in stable, practical holders, making them easily accessible and very visible. This makes it much easier to carry out medical examinations and nursing procedures. The holder houses up to three bottles and is easily fitted to almost all types of hospital bed. Many hospitals have already started using it because of its proven practical advantages.

### **Good for clinics. Good for hospitals.**

The Redon bottle holder is of sturdy welded construction, made of round steel that has been manufactured completely out of high-grade stainless steel.

This steel grade exhibits a high degree of mechanical and chemical stability.

As such, this bottle holder meets the most stringent standards of hygiene and durability.

## Technical Data

The Redon bottle holder holds one or three bottles as standard, but on request it can be customised to suit specific requirements.

### Design / Construction

Sturdy welded construction from round steel, Ø 4-5mm (0.16-0.20 inch)

- External dimensions: width (Triple): 305 mm (12.01 inch)  
width (Single): 100 mm (3.94 inch)  
height: 245 mm (9.65 inch)  
depth: 110 mm (4.33 inch)
- Internal dimensions of the bottle holder receptacles:  
diameter: Ø 90 mm (3.54 inch)  
height: 105 mm (4.13 inch)
- Dimensions of the holders clamp:  
clamping range: 65 mm (2.56 inch)  
width: 35 mm (1.38 inch)

### Material / Steel grade/ Processing

High-grade stainless steel (1.4571, 316Ti, S31635)

- excellent corrosion resistance, even with moderate chloride and acid concentration
- completely smooth, closed surfaces
- long-lasting quality of the surfaces, high wear resistance

### Cleaning / Hygienic Properties

- most cleaning supplies used in the cleaning and disinfecting of medical products can be used continuously without problems
- all of the current cleaning procedures (including sterilization) can be used without reducing the surface quality
